HASEEB METLA

Full Stack Developer | TypeScript, Node.Js, Python (Working Knowledge), React & Postgres | Internal Tools, API Integrations & AI Features | 11 Years

haseebmetla70@gmail.com |+92 3126085136| LinkedIn |https://github.com/HaseebCodes-11 | Portfolio

Remote from Pakistan | Comfortable with async work across time zones and US hours overlap | English: Advanced

EXECUTIVE PROFILE

Full stack developer with 11 years of experience shipping web apps end to end in TypeScript, Node.js, Python (Working Knowledge), React and Postgres. A lot of my recent work has been internal tools: admin dashboards, integrations with third-party platforms, workflow automation and AI features that save teams real time. I'm good at taking a vague request from a non-technical team, turning it into something scoped and shippable, and explaining the trade-offs in plain English. I use Claude Code, Cursor and Codex every day, but I still review and test what they produce before it ships.

KEY ENGINEERING WINS

- Cut API response times in half, from **900 ms to 450 ms**, by tracing slow queries and adding indexes and caching
- Reduced deployment time from **45 minutes to 8 minutes** by rebuilding CI/CD in GitHub Actions
- Raised automated test coverage from **40% to 85%** with Jest, React Testing Library and Playwright
- Cut new developer onboarding from **3 weeks to under 5 days** by documenting architecture, APIs and data models
- Work on a platform with **50+ APIs** and services serving **100K+ active users**

EXPERIENCE

Lead Full Stack Software Engineer

Luxoft *(Remote)* **Mar 2023 – Present**

- Build internal tools and admin dashboards end to end with React, Next.js, TypeScript, Node.js, Python and Postgres
- Integrate third-party platforms through REST APIs, OAuth, webhooks and MCP servers, with proper error handling for failed or delayed calls
- Ship LLM features in production, including prompt design, Zod-validated structured outputs and RAG
- Design Postgres schemas and Supabase RLS policies, and deploy on Supabase and Vercel
- Turn vague requests from non-technical teams into scoped features, then own code review, deployment and follow-up
- Use Claude Code, Cursor and Codex daily, and document architecture decisions so the team can build on them

Senior Full Stack Engineer

Alnafitha IT (Remote) **Jun 2020 - Mar 2023**

- Built full stack applications with React, TypeScript, Node.js and Express on PostgreSQL and MongoDB
- Built Stripe payment flows with webhooks, and automated workflows between internal systems
- Traced production issues from the UI down to the database, and fixed slow queries with indexing and Redis caching
- Introduced automated testing and rebuilt CI/CD, with services running in Docker on AWS

Full-Stack Software Engineer

Software One (Hybrid) **Dec 2017 – Jun 2020**

- Built React frontends styled with Tailwind CSS, and Node.js REST APIs on MySQL and SQL Server
- Delivered responsive interfaces that worked reliably across browsers and devices

Software Engineer

GlobalLogic Innovations **Jul 2015 – Dec 2017**

- Built frontend and backend web features with JavaScript, HTML, CSS and SQL

CORE COMPETENCIES

- **Languages:** TypeScript, Python, JavaScript, SQL
- **Frontend & Backend:** React, Next.js, Node.js, NestJS, Express, REST APIs, GraphQL
- **Data:** PostgreSQL, Supabase (RLS, schema design), MongoDB, Redis
- **Integrations:** OAuth, Webhooks, MCP Servers, Stripe, Workflow Automation
- **AI:** LLM Integration, Prompt Design, Structured Outputs (Zod), RAG, AI Agents, Claude Code, Cursor, Codex
- **Deployment & Quality:** Vercel, Supabase, AWS, Docker, GitHub Actions, Jest, Vitest, Playwright

ARCHITECTED PROJECTS

Soum.sa — Saudi E-Commerce & Auction Marketplace (10M+ app downloads)

- **What:** Auction, search and checkout features across Node.js APIs and React
- **Why:** Live bidding under heavy traffic had to stay fast and accurate
- **How:** Real-time APIs, query tuning, reusable components and fewer re-renders
- **Result:** Page load times on real devices dropped by **20%**

Abhi — Multi-Tenant Payroll & Payments SaaS ($500M+ processed, 450+ companies)

- **What:** Operations dashboards, transaction workflows and notifications
- **Why:** Business teams relied on it daily, so it had to be clear, correct and secure
- **How:** Role-based access, strict validation, webhooks and clear workflow states
- **Result:** Reliable daily operations for hundreds of businesses

Power.so — AI-Powered Workflow Platform

- **What:** AI features that process documents and automate multi-step review work
- **Why:** The team was spending hours on manual review, and raw LLM output wasn't reliable enough
- **How:** Prompt design, structured outputs with Zod validation, RAG, tool calling and evaluation checks
- **Result:** Review time dropped from 2 hours to 15 minutes, and LLM costs fell by **35–40%**

Skill Match & Ling Language App

- **What I did:** Built responsive screens with step-by-step forms and validation.
- **Why:** Users needed to finish a sequence without losing their place or hitting unclear errors.
- **How:** Small components, clear validation, and layouts that worked on smaller screens.
- **Result:** Flows became easier to complete and easier to extend later.

EDUCATION

B.S. in Computer Science (BSCS) — Bahauddin Zakariya University 2011 – 2015 • CGPA 3.60 / 4.00
