HASEEB METLA

Software Architect | Cloud-Native Systems | TypeScript / Node.js | AI-Enabled Applications

haseebmetla70@gmail.com |+92 3126085136| LinkedIn |https://github.com/HaseebCodes-11 | Portfolio

Open to world wide remote • Strong independent contributor with clear communication • Fluent in English

EXECUTIVE PROFILE

Software Architect and Lead Engineer with 11+ years of experience designing and delivering production distributed systems. Strong expertise in TypeScript, Node.js, scalable backend services, REST and asynchronous APIs, and cloud-native patterns. Experienced in technical leadership, architecture ownership, code reviews, and improving system reliability, security, and engineering quality. Hands-on with AI-assisted development and AI-enabled product features, with strong interest and practical readiness to design and productionize GenAI and RAG solutions.

KEY ENGINEERING WINS

- Owned architecture and delivery of scalable full-stack and backend systems serving **100K+** monthly active users
- **3+** years of technical leadership experience guiding engineers, conducting architecture and code reviews, and raising engineering standards
- Designed scalable service boundaries, APIs, data flows, and integration patterns for production workloads
- Improved system performance by **20%** through architectural and implementation optimizations
- Strong experience with relational databases, background processing concepts, caching, and production reliability
- Applied AI coding tools extensively while maintaining full ownership of quality, security, and final output

EXPERIENCE

Lead Full Stack Software Engineer

Luxoft *(Remote)* **Mar 2023 – Present**

- Own technical direction and architecture for major platform capabilities across backend services and web applications
- Design scalable architectures using TypeScript, Node.js, REST APIs, and relational databases
- Define service boundaries, data flows, and integration patterns for reliable production systems
- Lead architecture discussions, code reviews, and mentoring of a core team of **5** engineers
- Focus on performance, security, observability, and maintainable system design
- Drive engineering velocity and code quality improvements while taking features from design to production support
- Utilize AI-assisted development tools daily while ensuring rigorous validation of generated code

Senior Full Stack Engineer

Alnafitha IT (Remote) **Jun 2020 - Mar 2023**

- Designed and built scalable backend services and RESTful APIs using Node.js and TypeScript
- Worked extensively with relational databases and optimized data access and system performance (**20% latency reduction**)
- Contributed to reliable production systems with focus on clean architecture and maintainability

Full-Stack Software Engineer

Software One (Hybrid) **Dec 2017 – Jun 2020**

- Developed production web applications and backend services
- Designed APIs and worked with relational databases in agile delivery environments
- Focused on clean, well-structured, and reliable code

Software Engineer

GlobalLogic Innovations **Jul 2015 – Dec 2017**

- Built foundational web applications and backend components
- Developed strong software engineering fundamentals, version control practices, and collaborative development skills

CORE COMPETENCIES

- **Languages & Backend:** TypeScript, JavaScript, Node.js, REST APIs, asynchronous systems
- **Architecture:** Distributed systems, microservices concepts, scalable service design, domain-oriented thinking
- **Data:** PostgreSQL, relational database design and optimization, caching strategies
- **Cloud & DevOps:** Cloud platforms (AWS and Azure familiarity), Docker, containerization concepts, CI/CD, automated testing
- **AI & Modern Tooling:** AI-assisted development, AI-enabled product features, strong interest in GenAI, RAG, embeddings, and vector search
- **Leadership & Quality:** Architecture ownership, technical leadership, code reviews, mentoring, observability awareness, security-conscious design

ARCHITECTED PROJECTS

Soum.sa — High-Traffic Regional Transaction Marketplace

- Architected and optimized scalable full-stack systems for a high-volume marketplace. Improved real-device performance by 20% through better API design, data handling, and system-level optimizations.

Abhi — Fintech wallet & financial processing

- Designed secure transaction processing systems, multi-tenant access control, and reliable data pipelines using Node.js and PostgreSQL. Focused on data protection, service boundaries, and production reliability.

Power.so — High-performance web application

- Led development of core platform modules with emphasis on clean architecture, scalable services, and maintainable TypeScript/Node.js codebases.

Skill Match & Ling Language App

- Developed responsive mobile and web experiences with clear state management and thoughtful interaction design.

EDUCATION

B.S. in Computer Science (BSCS) — Bahauddin Zakariya University 2011 – 2015 • CGPA 3.60 / 4.00
